

## Task 2:

A.

You have tasked to implement IaC to manage infrastructure provisioning for the weather App project.

- Your team lead has asked you to create a new repository in in GitHub for the project ( call the repository **weatherappinfa**)
- And create a **ReadMe** file to describe the project. Let the content of the file be 'This is a simple weather app'. Use VScode to create the file
- Create another file called **main.tf**. Let the content of the be 'Hello Terraform'. Use VScode to create the file
- Push the 2 files into the remote repository
